

ATTRIBUTES OF CELTEC®

- **Vycom**, division of AZEK Building Products, produces **Celtec®**, and offers the broadest range of foam PVC sheets in today's market
- All **Celtec®** is produced in the USA
- **Celtec®** contains no heavy metals
- It is RoHs compliant
- It is USDA approved for incidental food contact

Production

- Sheets are oversized by a minimum of ¼" in length and width
- (this facilitates improved yields for cut jobs)
- Sheets are square to within 1/8"
- Same production process is used for all gauges 1mm through 30mm
- (produces consistency throughout all gauges)
- Superior gauge control throughout the sheet
- Consistent surface finish
- Smallest cell structure (allows for improved edge finishing)
- Density of 1mm through 6mm sheets = .68 to .70 gm/cm³ nominal. Allows for superior stiffness, better impact & excellent surface hardness
- Density of 10mm through 30mm sheets = .58 to .60 gm/cm³ nominal. This allows for better stiffness (spans greater area), impact, nail, staple and screw retention

Printing

- One material is acceptable for both Screen and Digital Printing
- Best white for UV cured Digital Printing
- Consistent white color (has remained unchanged since inception, and never faced issues with yellowing.
- White sheets in thicknesses 1mm, 2mm and 3mm are opaque, not translucent, as in some other name brands.

General Purpose Wood Replacement Board

- Best performance of all brands of white in outdoor exposure
- Excellent mechanical fastening properties (screw retention, nail hold, staple hold)
- Receptive to a wide range of adhesives
